Education

- PES University**, Btech in Computer Science and Engineering 09/2021 – 05/2025
- GPA: 8.43/10.0
 - Teaching Assistant - Intro to Generative AI**: Collaborated with faculty to enhance course materials, lectures, assignments, and assessments by integrating student feedback and aligning content with recent advancements in generative AI.

Experience

- AI Engineer**, StartupFuel – Canada, Remote Dec 2025 – June 2026
Building AI agents and post-training language models for finance and investments. Creating trust layers that make AI safer and more reliable.
- AI Engineer**, Vuhosi – UK, Remote Aug 2024 – Nov 2025
Leading AI initiatives to build the main product: copilot for investors and startup founders. Designed and deployed core agentic RAG systems using CrewAI. Spearheading the development of production-grade AI agents powering the product.
- AI Dev - Contract**, Plotweaver Apr 2025 – June 2025
Contracted via Vuhosi to support rapid prototyping of the MVP product. Collaborated closely with the team to build AI-first features aligned with storytelling workflows.
- AI Dev - Contract**, Carbonnote Dec 2024 – Feb 2025
Contracted via Vuhosi to help finalize and ship GreenIQ, an AI-driven sustainability analytics tool. Contributed to both product development and co-authored a research paper on its technical foundation.
- Summer Intern**, Composio – Bengaluru, In May 2024 – July 2024
Worked in DevRel to build and showcase AI products using Composio. Created 15+ guides, a custom OpenAI GPT, and multiple projects featured in documentation and social media, contributing to repo growth from 50 to 2K stars.
- Dev Intern**, VertexCover – Remote Dec 2023 – Jan 2024
Collaborated on GateGPT, an open-source third-party auth system for custom GPTs, integrating FastAPI, Pydantic, and Google OAuth to enhance security and UX.

Book and Research Publications

- Agent Engineering: Building, Evaluating, and Operating Reliable AI Agents** Under Contract
Book author under contract with **Apress**, covering the engineering principles and practices required to build, evaluate, and operate reliable AI agents.
- Paper**: RLRank: Distilling Offline Oracles into Online Policies for Document Reranking (Link)
Accepted at **ICML 2026 DEMO Workshop** (Poster).
- Paper**: Executable Ground Truth: A Closed-Loop Benchmark for Evaluating LLM Agents on (Link)
Microservice Incident Remediation
Accepted at **ICML 2026 CTB Workshop** (Poster).
- Paper**: Compositional Skill Acquisition in Agentic Pipelines via Reinforcement Learning and (Link)
Knowledge Distillation
Accepted at **ICML 2026 CompLearn Workshop** (Poster).
- Paper**: Benchmarking Logical Reasoning Inconsistencies in Local Large Language Models: Evidence (Link)
from Multi-Domain Evaluation
Accepted at **ICLR 2026 Workshop on Logical Reasoning of Large Language Models**
- Paper**: On the Structure of Floating-Point Noise in Batch-Invariant GPU Matrix Multiplication (Link)
Accepted at **ICLR Sci4DL 2026 Workshop**.
- Paper**: Reasoning Under Pressure: LLMs in Competitive Pokémon Battles (Link)
Accepted at **Neurips ER 2025 Workshop**.
- Paper**: Real Time Child Abduction And Detection System (Link)
Accepted and presented at the 15th IEEE International Conference on Intelligent Systems: Theories and Applications (SITA 2025).
Oct 20, 2025.
- Paper**: GreenIQ: A Deep Search Platform for Comprehensive Carbon Market Analysis and Automated (Link)
Report Generation
Accepted and Presented at the 10th International Conference on Machine Learning Technologies (ICMLT 2025). May 2025.

Projects

Devyan (289+ stars on Github)

Python, Crewai. June 2024

Built a multi-agent system that automates software development from a single prompt, orchestrating a team of agents: Architect, Programmer, Tester, and Reviewer to collaboratively plan, implement, test, and refine software projects end-to-end. This was built before the likes of bolt or lovable existed, as a fun side project. (Github) (Tweet) (Video)

Zenscript

Python. Sept 2023

Designed and implemented a toy programming language in Python to understand compiler and interpreter design. Built core components including a lexer, parser, AST evaluator, and runtime environment, enabling execution of user-defined logic and control flow. I built this in my 5th sem, as a fun project but later I became serious about the subject. (Github)

OS-2

C, Assembly. July 2025

Vibe-coded a simple 32-bit operating system from scratch in C and Assembly purely for fun as I was bored with prompting and python. Implemented a custom bootloader that switches to protected mode and rewrote the kernel in C. Work-in-progress project. Long-term goal is to get Doom running on the OS, probably 5 years from now. (Github) (Devlog)

Achievements & Notable Work

Reviewer at Neurips ER Workshop

Invited to serve as a Reviewer for the NeurIPS 2025 ER Workshop by the program committee, contributing to the peer review process for one of the premier AI research conferences, enhancing academic rigor and community impact.

Public Speaking

Delivered two technical talks at Microsoft Reactor on building and deploying AI agents, engaging a diverse developer audience.

Technical Writing & Knowledge Sharing

Authored multiple technical essays on AI agents on X, reaching 300K+ impressions and sparking insightful community discussions.
View Essays

Conducted workshops for school students to educate them about Hackathons and AI. Link

Academic & Community Engagement

- Recieved MRD and DAC scholarships at PES University
- Won Best Capstone Project Award in Panel 6 at Capstone Project Mela by Department of CSE, PES University. Link
- Mentor at HackerSpace (HSP), nurturing top tech talent at PES University.
- Member of ACM PESU ECC; volunteered at multiple hackathons and technical events. Team Lead at AIEP 2022
- Core member of PES Animal Welfare Club, leading dog care and feeding initiatives on campus.

Hackathons

- Judge, TechFusion 2.0 hosted by the Department of CSE at Dayananda Sagar Academy of Technology and Management, Bengaluru.
- Judge, OPQtech Summer AI Hackathon 2025
- Mentor, ACM Hacknight 2023
- 3rd Place, Kalpana – Hack for Humanity 2024. Link
- 3rd Place, MLH Global Hack Week May 2023. Link

Leadership

Founder, Turi Labs

Started Nov 2024

Turi Labs is a lean, indie AI research lab exploring agentic systems, intelligent systems, and emerging AI research.

- Built a research community of **25+ members** on a closed Discord community, bringing together researchers, engineers, and AI enthusiasts.
- Secured a **\$5,000 research grant from Thinking Machines Lab** to support independent AI research.
- Conducted **2 offline meetups** bringing together members of the AI research and engineering community.
- Produced **6 A* conference/workshop publications**, spanning research on AI agents, LLM reasoning, reinforcement learning, benchmarks, and GPU computation.
